EDUCATIONAL PSYCHOLOGY

Introduction

Educational psychology is the branch of psychology in which the findings of psychology are applied in the field of education. It is the scientific study of human behaviour in educational setting. Education by all means in an attempt to mould and shape the behaviour of the pupil. It aims to produce desirable changes in him for the all-round development of his personality.

Thus educational psychology concerned primarily with understanding the process of teaching and learning that take place within formal environment and developing way of improving those methods. It covers the important topics like learning theories, teaching methods, motivation, cognitive emotional and moral development and parent child relationship etc.. In short it is the scientific discipline that addresses the questions "why do some student learn more than others, what can done to improve the learning".

Meaning of educational psychology

Education psychology may be defined as the study of the human mind and behaviour with relation to teaching learning process. Educational psychology involves all the people who learn and help learning, teach and help teaching. Educational psychology is one of the branches of applied

psychology concerned with the application of the principles, techniques, and other resource of psychology to the solution of the problems confronting the teacher attempting to direct the growth of children toward defined objective. Educational psychology is concerned with the understanding of the child his development, his needs and his potentialities. If the learning situation including group dynamics as it affect learning iii. The learning process its nature and the way to make it effective. They are also concerned with research on issues of relevance for education, counselling and learning problems.

Definitions

According to Skinner :

Educational psychology covers the entire range of behaviour and personality as related to education, it is the branch of psychology deals with teaching and learning.

Glozin:

Educational psychology as " Research on student, teaching and learning processes. Skills values and attitude distilled from teacher to student in the classroom, including psychology principle in teaching.

- Crows and crow
- Educational psychology describe and explains learning experience of an individual from birth to old age.

Educational psychology is the application of the finding and theories of psychology in the field of the education to make it effective. They are also concerned with research on issues of relevance for education, counselling and learning problems.

Nature of educational psychology

This nature is scientific as it has been accepted that if it is a science of education, we can summarize the nature of educational psychology in the following ways.

1. Educational psychology is a science.
 2. Educational psychology is a natural science.
- An educational psychology conducts investigation gathers his data and reaches his conclusions in exactly the same manner as physicist or the biologist.

Educational psychology is the science of Education.

Educational psychology is a social science, like the sociologist, anthropologist, economist or political scientist the educational psychologist studies human beings and their sociability.

Educational psychology is a positive science normative science like logic or ethics, deals with facts as they ought to be. A positive science deals with facts as they are as they operate. Educational psychology studies the child's behaviour as it is not as it ought to be so it is a positive science.

Educational psychology is an applied science. It is the application of psychological principles in the field of education. By applying the principle and techniques of psychology, it tries to study the behaviour and experience of the pupils. As a branch of psychology it is parallel to any other applied psychology. For example educational psychology draws heavily facts from such areas as developmental psychology, clinical psychology, abnormal psychology and social psychology.

Educational psychology is a developing or growing science. It is concerned with new and ever new research. As research finding accumulate educational psychology get better picture onto the child's nature and behavior.

Scope of educational psychology

The scope of educational psychology is ever growing due to constantly researches in this field the following factors well indicate the scope of educational psychology.

1. The learner

The subject matter of education psychology is knitted around the learner. Therefore the need of knowing the learner and the techniques of knowing him well like topics include the innate abilities and capabilities of the individual differences and their measurements, the conscious as well as unconscious behaviour of the learner the characteristic of his growth and development and each stage beginning from childhood to adulthood.

2. The learning experience

Educational psychology helps in deciding what learning experience are desirable at what stage of the growth and development of the learner. So that these experiences can be acquired with a greater ease and satisfaction.

3. Learning process

After knowing the learner and deciding what learning experience are to be provided educational psychology moves on to the laws, principles and theories of learning other items in the learning process are remembering and forgetting, perceiving, concept formation.

thinking and reasoning, problem solving, transfer of learning ways and means of effective learning etc

Learning situation or Environment

Topic like classroom climate and rough dynamics technique and aids that facilitate learning and motivation techniques and practices, guidance and counselling etc for the smooth functioning of the technique of teaching learning process.

It studies human behaviour in educational situations, psychology is the study of behaviour and education deals with the modification of behaviour, hence education psychology permeates the whole field of education.

It studies the growth and development of the child how a child passes through the various stages of growth and what are the characteristic of each stage are included in the study of educational psychology.

Educational psychology deals with the nature and the development of the personality of an individual. In fact education has been defined as the all around development of the personality of an individual.

It studies the individual difference Every individual differ from every other individual it is one of the fundamental facts of human nature which have been brought to light by psychology

9. It studies the mature intelligence and its measurement this is of utmost importance for a teacher.

10. It provides guidance and counselling.
Education is nothing but providing guidance to the growing child.

Importance of Educational Psychology

- * Helps the teacher in understanding developmental characteristics of children.
- * Equips the teacher with the knowledge of principles of learning and problems in learning.
- * Helps in understanding individual differences
- * Gives to the teacher appropriate knowledge of teaching methods.
- * Psychological tests and tools help the teacher to assess the learning outcomes of students.
- * Understanding group dynamics
- * In learning the various factors which are responsible for the mental ill health and maladjustment of students
- * Helps the teacher in developing and using appropriate audio-visual aids
- * Helps in planning co-curricular activities and timetable etc
- * In solving problems of discipline among the students.

Methods of Educational Psychology

Introspection method
This is one of the oldest method which was previously used in psychology. It means looking within or into the working of our minds and reporting what we find there.

Observation method

This method involves looking outside one's own self. There are different types of observation such as natural or artificial. Scheduled or unscheduled participant and non-participant and direct or indirect.

Experimental Method

This method has focused on different ways of recognition. It shows the effect of different factors on learning, mental fatigue, imagination, duration of attention and the role of maturation in their lives and in learning.

Clinical method

This method is used to collect detailed information on the causes and sources of people's fears, worries, obsession, their maladjusted drives, causes.

5. Genetic or Developmental method.
This method shows how a simple behaviour pattern in one's childhood can become complex gradually with age and become a major behaviour pattern as the person grows up.
6. Testing method.
This method comprises psychological tests, educational measurements, rating scales, checklists, admission management and questionnaires. Rating scales and checklists are the two most important elements that help in observing and evaluating one's personality and traits.
