Introduction to the unit test

A unit test can be made an effective instrument of evaluating the achievement of ① objective ② constant ③ The learning activities.

It is not enough to evaluate the content only the teacher should evaluate the total behaviour of the students. This is possible only when they evaluate the achievement of the objectives of all the three domains like cognitive, affective and psychomotor domain.

A test examines the achievement of the student quantitatively in knowledge domain only but evaluation is broader than test.

To examine the achievements quantitatively as well as quantitatively in round progress of the students. Testing leads to good learning but test should be preplanned, systematic and scientific.

Meaning and definition of unit test.

The preparation of a standard set of questions to be answered by the students individually

unit test is a short test to be conducted at the end of a teaching a particular unit. unit test is a short test to measure the effectiveness of teaching and learning of the students after teaching a specific unit.

Importance and objectives of unit test:

- 1) By the unit test the teacher is able to judge the level of students achievements.
- 2) The efficiency of the teacher can be measured.
- 3) It helps to discover the specific of the student.
- 4) It helps to determine the ability of students in the subjects of study.
- 5) It enables the teacher to help to adopt remedial measures to remove the drawback.
- 6) It provides incentive to work hard for improvement in learning.
- 7) It can also find ways to supply and feedback the students in learning.

Plan or design of unit test:

The plan of the unit test is to be prepared such that it may be used as an effective

1. The objectives included in the unit plan may require different type of testing such as written test, an oral test, a performance test and observational technique.
2. The main task is to divide the weightage to the given to different objectives included in the unit test.
3. The weightage should be divided by the common examples including class teacher.
4. Weightage to subunits is to be divided for the different areas of the content which are included in the unit plan.
5. Weightage can be given according to the number plays in the test or the opening of the expert committee.

Blueprint: Blueprint is three dimensional chart showing the weightage given to the objective, content and terms of questions. The blueprint serves important improvement of the content validity if the teacher makes test, it defines the scope and emphasis of the unit test. It relates objectives to the content. It provides greater advance assurance that the test units will measure balanced manner.

get the utmost benefit.

Needs for preparing blueprint:

1. The blueprint serves many useful purposes.
2. It may also help to improve the content validity teacher-made test.
3. It defines as clearly as possibly the scope and Emphasis of the test.
4. These relates the objectives to the content.
5. It provides greatest that the test will measure learning outcomes and course content in the balance manner.

construction of the Question paper:

The next step is to construct the Question paper according to blueprint various kinds of question should be improved involved in the question paper according to the blueprint, Questions may be selected if a question bank is ready in your school. Every School should have a subject wise Question bank.

Preparing model answer and scoring key:

With the scoring key. The making is essential in the short answer types and essay type of answers such point in the essay type should be kept in secret and only to be opened after exams.

Item Analysis: Item analysis begins after the test is over, the answer of the examination are to be analysed to check the effectiveness of the test items only the items which are effective to be discovered. This is statistical procedure which is usually followed in the process of standardization of the test.

Analysis and interpretation of data:

After the evaluation with the help of the model question paper, scores gets by the students may be analysed questions by the interpretation of the data, the abilities and weakness of the students can be identified. Then remedial teaching may be done for the backwards and slow learners in the school.

Advantages of the unit test:

1. The effectiveness of the teacher and response of

- 2) The learning abilities and weakness of the students can be identified.
3. The continuous evaluation of learners can be made.
4. The achievement of objectives in the unit test will be known.
5. On the basis of scores obtained in the unit test the students will be classified.
6. Teacher can understand their difficulties of interacting and try to make them in future.
7. It helps the teacher to give individual attention to the need.
8. Unit test makes the process of debugging easier.
9. Developers looking learn what functionality is provided by a unit and how to use it can look at the unit tests to gain a basic understanding of the unit API.

Disadvantage of unit test:

- 1) Unit test can't be expected to catch every errors in a program. It is not possible to evaluate all execution paths even in the most trivial programme.

- 1) Unit test cannot detect integration or interfacing issues between two modules.
- 2) It cannot catch complex errors in the system ranging from multiple modules.
- 3) It cannot test non-functional attributes like usability, Scalability, the overall performance of the system etc.
- 4) can be time-consuming and tedious.
- 5) Demands patience and thoroughness from the development team.
- 6) Must maintain vigorous documentation.

Weightage to the objectives.

Sl. No.	Objectives	For 100	For 25
01.	Knowledge	16	4
02.	understands	24	6
03.	Application	33	5
04.	Skill	28	5
05.	Total	100	25

Weightage to the sub-unit:

Sl. No	Content	For 100	For 25
01.	Introduction to an atom	16	2
02.	Structure of an atom	23	3
03.	Laws of chemical combination	11	2
04.	Molecules and its types	34	5
	Total	100	25

Weightage to Question type:

Sl. No	Question type	For 100	For 25
01.	Very short answer	16	5
02.	Short answer	11	10
03.	Long answer	23	10
04.	Total	100	25

Weightage to difficulty level:

Sl. No.	Difficulty level	For 100	For 25
01.	Easy	14	03

Gout High School, Sakleshpur

Unit test

Class: 9th std.

Subject: Chemistry.

Time: 1 Hour

Marks: 25

Answer the following in a one word or sentence.

What are atoms?

$$5 \times 1 = 5$$

State "law of conservation of mass."

What are protons? Where do protons present?

Name the philosophers, who worked on atomic theory.

What are Electrons?

Answer the following in two to three sentences:

Define matter: What are the states of matter?

$$5 \times 2 = 10$$

Name the symbols of elements of atoms given below.

8. What is solid state? Give any two examples the following (One word answer):

9. What are monoatomic and diatomic molecules?

Molecules are small tiny, minute particles present in our surroundings. It is also called as building blocks of matter.

10. How are electrons arranged in atoms?

Law of conservation of mass states that mass can neither be created nor be destroyed.

(ii) Answer the following questions half a page each.

11. Explain the structure of atom with neatly labeled diagram.

Protons are the positively charged particles present in an atom. Protons are present in the centre of the atom inside the nucleus.

12. What are polyatomic groups? Name a few groups along with their valency.

Charshi Kanad, Pakudha Katayama worked on theory of an atom.

Electrons are negatively charged particles present in an atom and they revolve in a circular orbit of an atom.

Answer the following in two to three sentences:

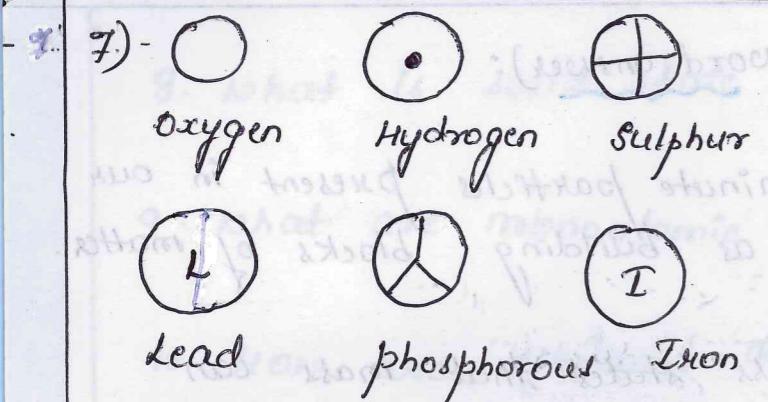

Matter is defined as anything which has mass and can occupy space is called as matter.

States of matter are:-

1.) Proton : positively charged particles.

2.) Neutron : Neutrally charged particles.

3.) Electron : Negatively charged particles.

8.) Solid state is a state, where the molecules are compactly arranged in an object.
Ex:- Bench, table, Blackboard.

Here the intercellular spaces are less, molecules are closely arranged in an object.

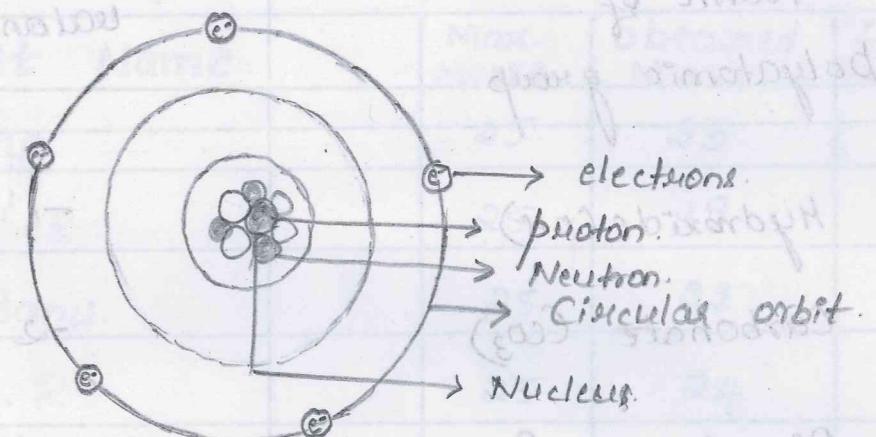

9.) Monoatomic molecules are the molecules, where molecule is made up of one atom.

~~Diatomic~~ molecules are the molecules, where molecules are made up of more than two atoms.

10.) Atoms consists of three sub-atomic particles. They are protons, electrons and neutrons. electrons are arranged in a circular path called as circular orbits. Electrons are negatively charged particles.

Electrons always revolve in a circular path, it will not fall on the nucleus. We can see the electrons in the M shell.

11) Answer the following (long answer type):

Atom is the smallest unit of matter. It consists of a positively charged centre termed as "nucleus". Also, negatively charged electrons surround the central nucleus. Even though an atom is the smallest unit of matter.

Protons have a positive electric charge.

Neutrons have no charge. They are neutral.

Atoms have characteristic masses (atomic weights)

Atoms combine with one another in definite, whole number proportions to make compounds.

12) polyatomic group refers to group, where many atoms combine to form a group. Sometimes these groups can also participate in chemical reaction.

Some list of polyatomic groups:

Class 9th

Scoring key and marking scheme

Name of polyatomic group	Valency.
Hydroxide (OH^-)	-1
Carbonate (CO_3^{2-})	-2
Bicarbonate (HCO_3^-)	-1
Sulphate (SO_4^{2-})	-2
Phosphate (PO_4^{3-})	-3
Nitrate (NO_3^-)	-1
Ammonium (NH_4^+)	+1
Phosphite (PO_3^{3-})	-3
Sulphite (SO_3^{2-})	-2

12.	Subunit 4	Application	Essay type	SA	8min	5m	Average

Raw score

Difficult techniques of evaluation process provides us the data in the form of scores or marks which are called as "Raw score".

Secured scores of the students.

23, 19, 21, 24, 15, 19, 18, 22, 20, 23, 21, 18, 24, 23, 24, 20, 24, 21.

Range:

Range = Highest score - Lowest score.

$$= 24 - 15$$

$$\boxed{\text{Range} = 9}$$

Size of the class interval = Range

Desired C.I

$$= \frac{9}{4}$$

$$= 2.25 \approx 3$$

Size of the score in class interval

Class Interval	Tallies	Frequency
15 - 17	1	1
18 - 20		6
21 - 23		7
24 - 26		5
		$\sum f = N = 19$

Computation of mean for grouped data:

Mean: Mean is the average of obtained score that is obtained score divided by total number of students. Mean is the average performance.

C.I	Tallies	(F)	(x)	$\sum fx$
		Frequency	Mid point	
15 - 17	1	1	16	16
18 - 20		6	19	114
21 - 23		7	22	154
24 - 26		5	25	125
		$N = 19$		$\sum fx = 409$

$$\text{Mean} = \frac{\sum f_x}{N}$$

$$= \frac{409}{19}$$

$$\boxed{\text{Mean} = 21.50 \approx 22.}$$

Calculation of median for grouped data

C.I	Frequency (f)	C _f
15-17	1	1
18-20	6	7
21-23	7	14
24-26	5	19

$$N = 19$$

$$f_m = 7$$

$$N/2 = 9.5$$

$$L = 20.5$$

$$C_f = 7$$

$$\text{Median} = L + \left(\frac{N/2 - f_{fb}}{f_m} \right) C_i$$

$$= 20.5 + \left(\frac{9.5 - 7}{7} \right) 3$$

$$\boxed{\text{Median} = 21.57 \approx 22.}$$

Mode: Mode is the most frequently occurring number in a series. Mode is the point on the scale of measurement with maximum frequency in a distribution.

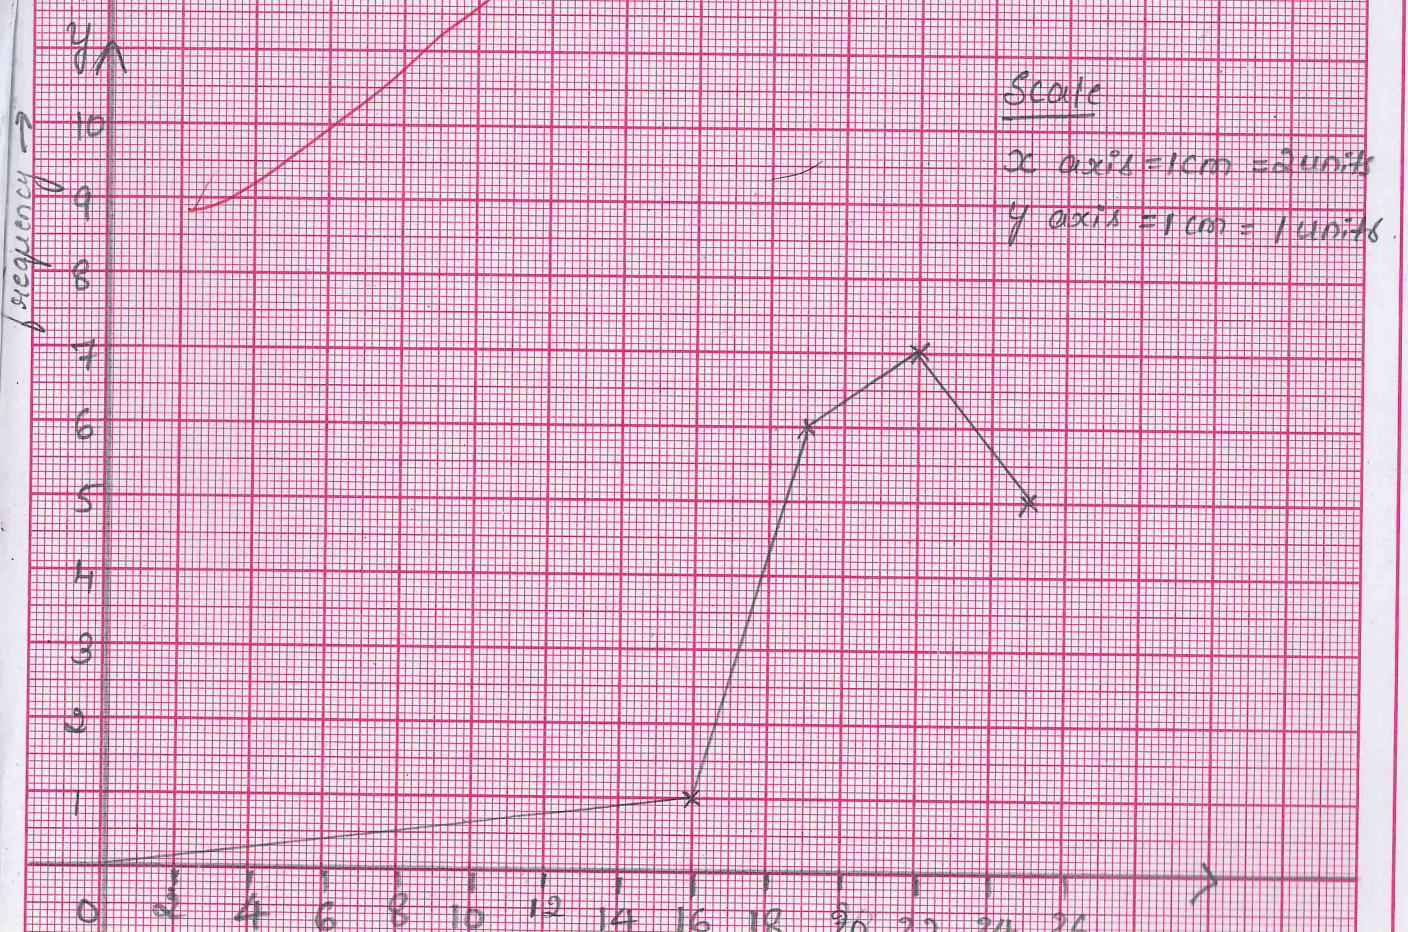

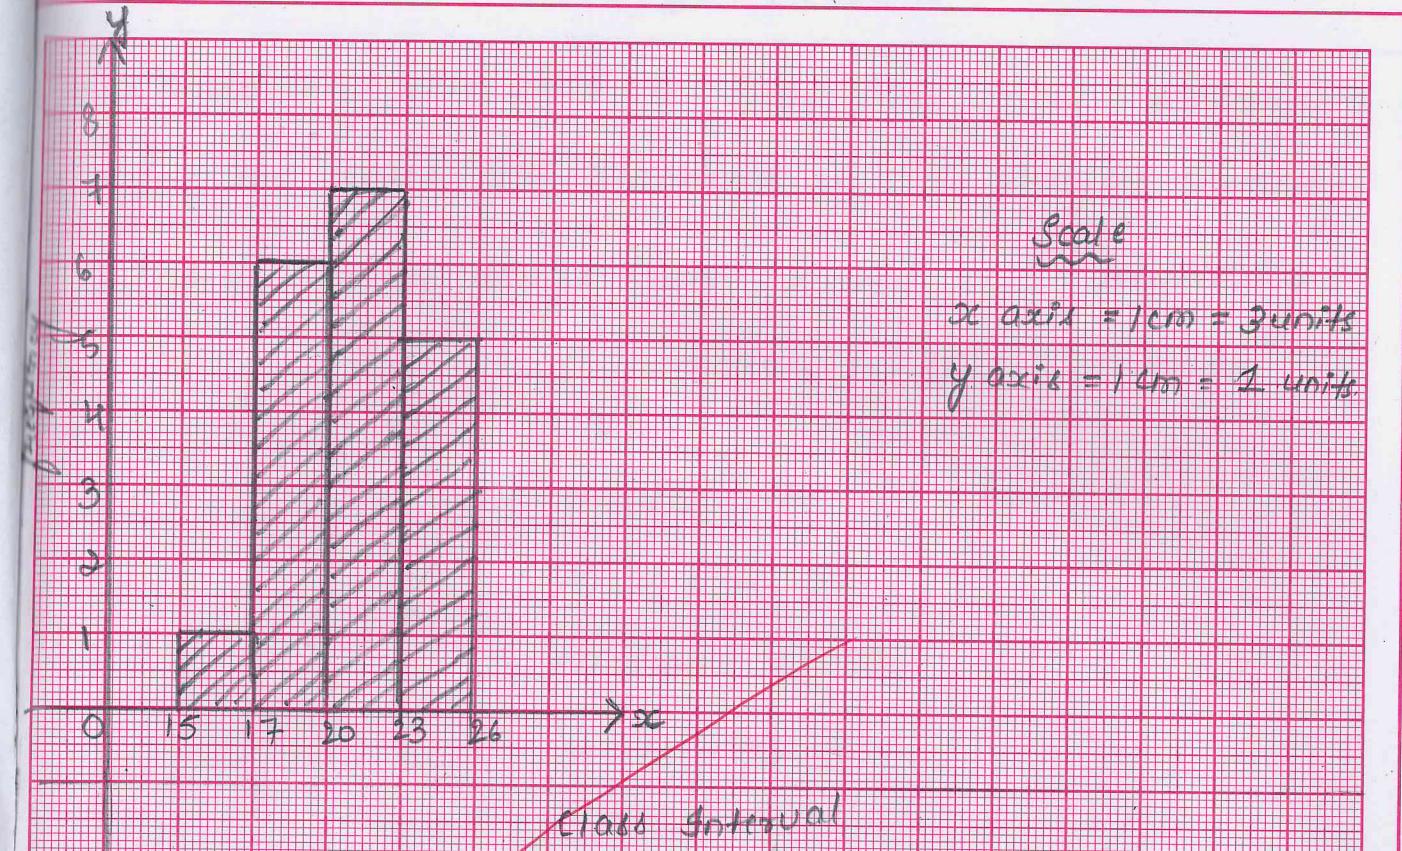

Class Interval	frequency (f)	C _f
15-17	1	1
18-20	6	7
21-23	7	14
24-26	5	19

$$\text{Mode} = L + \left(\frac{f_1 - f_0}{2f_1 - f_0 - f_2} \right) C_i$$

$$= 20.5 + \left(\frac{7-5}{14-5-6} \right) 3$$

Date :

Batch No :

Interpretation

Conducted unit test in Govt. high school, sakleshpura for the class 9th standard in the subject chemistry. Later answer script were scored and statistically analysis by finding mean, median and mode.

Those values are as follows.

$$\text{Mean} = 21.52$$

$$\text{Median} = 21.57$$

$$\text{Mode} = \underline{\underline{22.5}}$$

Conclusion :

Unit test is one of the important step in evaluation system. The testing teach to good learning but learning should be pre-planned systematic and scientific by the unit test, the teacher is able to judge the level of student's achievements. It helps to discover the specific weakness of the students. It helps to determine the ability of students. It helps to supply and feedback the students in learning. The educational guidance can be given to the students on the basis of performance.

The result of the test can guide the teachers to make any changes in the method of teaching.

Introduction to the unit test

A unit test can be made an effective instrument of evaluating the achievement of ① objective ② constant ③ The learning activities.

It is not enough to evaluate the content only the teacher should evaluate the total behaviour of the students this is possible only when they evaluate the achievement of the objectives of all the three domain.

A test examines the achievement of the student quantitatively in knowledge domain only but evaluation is broader than test.

To examine the achievements quantitatively as well as qualitatively in all round progress of the students.

Testing leads to good learning but test should be preplanned, systematic and scientific.

Meaning and definition of Unit Test

The preparation of a standard set questions to be answered by the students individually is one of the forms of evaluation.

Unit test is a short test to be conducted at the end of a teaching a particular unit.

Unit test is a short test to measure the effectiveness

Importance and objectives of Unit test.

1. By the unit test the teacher is able to judge the level of students achievements.
 2. The Efficiency of the teacher can be measured.
 3. It helps to discover the specific of the student.
 4. It helps to determine the ability of students in the subjects of study.
 5. It enables the teacher to help to adopt remedial measures to remove the drawbacks.
 6. It provides incentives to work hard for improvement in Learning.
 7. It can also find ways to supply and feedback for the students in learning.
 8. It enable to send the progress cards to the parents about the pupils study.
 9. The educational guidance can be given to the students on the basis of performance.
- pre-results of the test can guide the teacher to make any changes in the method of teaching.

Plan @ Design of Unit test

The plan of the unit test is to be prepared such that it may be used as an effective instrument of evaluation. A proper design would increase the validity, reliability, objectivity and suitability of the test.

1. The objectives included in the unit plan may require different type of testing such as written test, an oral test, a performance test and observational test & techniques.
2. The main task is to divide the weightage to the given to different objectives included in the unit test.
3. The weightage should be divided by the common examples including class teacher.
4. Weightage to sub-units is to be divided for the different areas of the content which are included in the unit plan.
5. Weightage can be given according to the number of plays in the test @ the opening of the expert committee.

Blue print

Blue print is the three dimensional chart showing the weightage given to the blue print objectives, content and terms of questions. The blue print serves important improvement of the content validity of the teacher made test. It defines the scope and emphasis of the unit test. It relates objective to the content. It provides greater advance assurance that the test units will measure learning outcomes and cover content in balanced manner. It should be prepared by the teacher will in advance to get the out most benefit.

Needs for preparing blueprint

1. The blueprint serves many useful purposes.
2. It may also help to improve the content validity of teacher made test.
3. It defines as clearly possible the scope and emphasis of the test.
4. These related to objectives to the content.
5. It provides greatest that the test will measure learning outcomes and cause content in the balanced manner.

Construction of the question paper:

The next step is to construct the question paper according to blueprint various kinds of questions should be improved involved in the question paper according to the blueprint. Questions may be selected if a question bank is ready in your school. Every school should have a subject wise question bank. More and more item should be added to question bank everyday, month and year. So you can select the questions needed from bank.

Preparing model answer and scoring key:

In the question paper should have been answered well before hand, together with the scoring key, the making is essential in the short answer type of answer such point in the essay type should be kept in secret and to be opened after exams.

Item analysis

Item analysis begins after the test is over. The answer of the examination are to be analysed to check the effectiveness of the test items only the items which are

Analysis and interpretation of data

After the evaluation with the help of the model question paper scores got by the students may be analysed by the interpretation of the data, the ability and weakness of the students can be identified. The remedial teaching may be done for the backwards & slow learners in the school.

Advantages of unit Test:

1. The effectiveness of the teacher and response of the learners can be known.
2. The learning abilities and weakness of the students can be identified.
3. The continuous education of learners can be made.
4. The achievement of objectives in the unit test will be known.
5. On the basis of scores obtained in the unit test the students will be classified.
6. Teacher can understand their difficulties of interacting and try to make them in future.
7. It helps the teacher to give individual attention to the need.
8. Unit test makes the process of debugging easier.
9. Developers looking to learn what functionality is provided by a unit and how to use it can look at the unit tests to gain a basic understanding of the unit API.
10. Due to the modular nature of the unit test can be used

Conclusion

importance of unit test

Unit test is one of the important step in evaluation system.

The testing is to good learning but learning should be preplanned systematic and scientific. By the Unit test the teacher is able to judge the level of students achievements. It helps to discover the weakness of the students. It helps to discover the ability of the students in the subject of study.

It can also be a way to supply and feed back the students in learning. The educational guideline can be given to the students on the basis of performance.

The result of the test can be guide the teacher to make any changes in the method of teaching.

Introduction to the unit test

A unit test can be made an effective instrument of evaluating the achievement of ① objective ② constant ③ The learning activities.

It is not enough to evaluate the content by only the teacher should evaluate the total behaviour of the students. This is possible only when they evaluate the achievement of the objectives of all the three domain.

A test ~~examines~~ the achievement of the student quantitatively in knowledge domain only but evaluation is broader than test.

To examine the achievements quantitatively as well as qualitatively in all round progress of the students.

Testing leads to good learning but test should be preplanned, systematic and scientific.

Meaning and definition of Unit Test

The preparation of a standard set questions to be answered by the students individually is one of the forms of evaluation.

Unit test is a short test to be conducted at the end of teaching a particular unit.

Importance and objectives of unit test.

1. By the unit test the teacher is able to judge the level of students achievement
 2. The efficiency of the teacher can be measured.
 3. It helps to discover the specific of the student.
 4. It helps to determine the ability of students in the subjects of study.
 5. It enables the teacher to help to adopt remedial measure to remove the drawbacks
 6. It provides incentives to work hard for improvement in learning
 7. It can also find ways to supply and feedback for the parents about the pupils study
 8. It enable to send the progress cards to the parents about the pupils study.
 9. The educational guidance can be given to the students on the basis of performance
- Pre-results of the test can be used by the teacher to make any changes in the method of teaching

Plan @ Design of Unit test

The plan of the unit test is to be prepared such that it may be used as an effective instrument of evaluation. A proper design would increase the validity, reliability, objectivity and suitability of the tool.

1. The objectives included in the unit plan may require different type of testing such as written test or oral test, a performance test and observational test & techniques.
2. The main task is to divide the weightage to the given to different objectives included in the unit test.
3. The weightage should be divided by the common examples including class teacher.
4. Weightage to sub-units is to be divided for the different areas of the content which are included in the unit plan.
5. Weightage can be given according to the number of parts in the test or the opening of the expert committee.

Blue print

Blue print is the three dimensional chart showing the weightage given to the blue print objectives, content & terms of questions. The blue print serves important improvement of the content validity of the teacher made test. It defines the scope and emphasis of the unit test. It relates objectives to the content. It provides greater assurance that the test units will measure learning outcomes and cover content in balanced manner. It should be prepared by the teacher will advance to get the most benefit.

Needs for preparing blueprint

1. The blue print serves many useful purposes.
2. It may also help to improve the content validity of teacher made test
3. It defines as clearly possible the scope and emphasis of the test
4. These related to objectives to the content.
5. It provides greatest that the test will measure learning outcomes and cause content in the balanced manner.

Construction of the question paper

The next step is to construct the question paper according to blueprint various kinds of questions should be improved involved in the question paper according to the blueprint. Questions may be selected if a question bank is ready in your school. Every school should have a subjectwise question bank. More and more item should be added to question bank everyday, month and year so you can select the questions needed from bank.

Preparing model answer and scoring key

all the questions paper should have been answered well before hand together with the scoring key. The making is essential in short answer type questions such point in the easy type should be kept in secret and to be opened after exams.

Item analysis

Item analysis begins after the test is over the answer of the examination are to be analysed to check the effectiveness of the test items only the item which are

which is usually followed in the process of standardisation of the test.

Analysis and interpretation of data

After the evaluation with the help of the model question paper scores got by the students may be analysed question by the interpretation of the data. The ability and weakness of the students can be identified. The remedial teaching may be done for the backward & slow learners in the school.

Advantages of unit Test

1. The effectiveness of the teacher and response of the learner - s can be known.
2. The learning abilities and weakness of the students can be identified.
3. The continuous education of learners can be made.
4. The achievement of objectives in the unit test the students will be classified
5. On the basis of score obtained in the unit test the students will be classified
6. Teacher can understand their differences of interacting and try to make them in future.
7. It helps the teacher to give individual attention to the need.
8. Unit test makes the process of debugging easier.
9. Deviations in the test items are easily identified by a

Conclusion

Unit test is one of the important step in evaluation system.

The testing teach to good learning but learning should be preplanned systematic and scientific. By the unit test the teacher is able to judge the level of student's achievements. It helps to discover the specific weakness of the students. It helps to determine the ability of students in the subject of study.

It can also be a way to supply and feed back the students in learning. The educational guideline can be given to the students on the basis of performance.

The result of the test can be guide the teachers to make any changes in the method of teaching.

Introduction to the unit test

Unit test can be made an effective instrument of evaluating achievement of objectives, content and learning activities. It is not enough to evaluate the content only. The teacher should take into account the total behaviour of the students. A test examines the achievement of the student quantitatively in knowledge domain only. It is broader than test. It examines the achievement of the student as well as qualitatively in all around progress of the student.

Unit test

Unit test is a test which is constructed, administered and by a teacher after teaching a particular unit to a students post when the unit is taught. A unit test is a set of items are constructed for the whole unit after the completion of unit, to test the behavioural change in the children. It is very helpful to the teacher to know about the performance of pupils on that unit. This will help the teacher to improve teaching technique and students also derive a lot of making use of this test. It also help the teacher in

Introduction to the unit test

A unit test can be made an effective instrument of evaluating the achievement of objectives, content and learning activities. It's not enough to evaluate the content only. The teacher should evaluate the total behaviour of the students. A test examines the achievement of the student quantitatively in knowledge domain only. But evaluation is broader than test. It examined the achievement quantitatively as well as qualitatively in all round proportion of the students.

Meaning of unit test

A unit test is a test which is constructed, administered and assessed by a teacher after teaching a particular unit to a group of students just when the unit is taught. A unit test is a test whose items are constructed for the whole unit after the instruction is over, to test the behavioural change in the children.

A unit test is very helpful to the teacher to know about the performance of pupils on that unit. This will help the teacher to modify the teaching technique and students also derive a lot of benefit by making use of this test. "It also help the teacher in finding out the deficiency in the students".

Definition of Unit Test

Test done at end of instructional unit

The presentation of a standard set of questions to be answered by the students individually.

The unit test is a short test to be conducted at the end of teaching a particular unit.

Unit test is a short test to measure the effectiveness of teaching and learning of the students after teaching a specific unit.

It is comparing between the pupils to know the platitude group importance and objectives of unit test.

* By the unit test the teacher is able to judge the level of student achievement.

* The efficiency of the teacher can be measured.

* It helps to discover the specific weakness of the students.

* It enables the teacher to adopt remedial measures to remove the drawbacks.

* It helps to determine the ability of students in the subject.

* It can also find ways to supply and feed back the students in learning.

* It enables to find the progress & could to the parents about the pupil's study.

- * The educational guidance can be given to the students on the basis of performance.
- * The result of the test can guide the teacher to make any changes in the methods of teaching.

Planning of design of the unit test

The plan of the unit test is to be prepared so that it may be used as an effective instrument of evaluation. A proper design would increase the validity, reliability, objectivity and suitability of the test.

The objectiveness included in the unit plan may provide different type of testing such as a written test.

Importance of unit Test

- * It decides the effectiveness of teaching.
- * It helps to know the learners' achievement.
- * To know the weakness and strength of students.
- * To knowing whether the predetermined instructional objectives are met or not.
- * It acts as a feedback device for teacher and student.

- * It develops the self-confidence in facing the examination.
- * It is helpful for classifying the students.
- * It is useful in helping students to choose suitable subjects for career.
- * It also helps to used for evaluating and improving

Importance of unit test

- If decides the effectiveness of teaching.
- To judge the level of achievement.
- To know the weakness and strengths of students.
- To know the knowledge of students.
- If acts as a feedback for teacher.

Blueprint

Blueprint is a three dimensional chart and measuring unit which includes planning, preparation, selection, executing and evaluation. Blueprint shows the distribution of text items content and objective of the test.

Blueprint is a detailed plan of action or outline in a technical form. The Blueprint shows improvement of the content valid of teacher made test. It defines the scope and emphasis of the text and it relates objective to the content. It should be prepared by the teacher well in advance to get the utmost benefit.

Importance of Blueprint

- * It is very important while compiling question papers for the unit.
- * It helps to systematically select the questions in all subunits.
- * It is guide to construct the unit test.
- * It helps to cover content of all the sub-unit.
- * It helps to improve the content validity of teacher made test.
- * It provides greater assurance that the test will measure learning outcomes.

11. what are the effects of water pollution on plants and Animals?

12. what is potable water?

13. write any 3 methods to make potable water?

Answer the following Question in half a Page each.

3X3-6M

14. Describe the threat to the beauty of the Taj mahal

18. Explain the case Study report of the river Ganga.

Multiple Choice Questions

- a. Water pollution
- b. Oxygen
- c. Acid rain
- d. All of the above
- e. Both b and c
- f. Ganga River
- g. All of the above.
- h. Pure and fit for drinking.

Answer the following questions in 2-3 Sentences

The presence in air introduction into the air of a substance which has harmful or poisonous effects.

The substance which contaminate the air is known as Air pollutants.

Air pollution, Heart disease, lung cancer, Asthma are the health problem caused by air pollution.

Chemical waste, Industrial waste, oil spills, Sewage disposal are the cause of causing water pollution.

Toxic, Nocotoxic, Pollutants lead to death, burning of leaves, Asthma, in infections are the effects of water pollution on plants and animals.

Potable water is the water which is filtered and treated properly and free from all contaminants and harmful bacteria.

Filtration, Distillation, Boiling are the methods to make potable water.

11. Answer the following question in half a page each.

4) The major threat to the Taj Mahal is the acid rain. When the acid rain falls on the Taj, which is completely made of marble they attack with marble to form a powder like substance, which is then washed away by the rain. This phenomenon is known as marble cancer. In addition, the soot particles emitted from the Mathura oil refinery located near Agra is leading to the yellowing of Taj Mahal marble.

Ganga River is one of the longest river in India and it provides water to about 40% of India's population. From source to mouth the total length of Ganga River is 2600 km and the Ganga basin covers almost quarter area of Indian mainland. The four important parameters are,

Dissolved oxygen, Biochemical Oxygen Demand, Fecal coliform and Total Coliform are the parameters. Ganga action plan was started into 1985, to improve the water quality of Ganga to acceptable standard by preventing the pollution.

Raw Scores

Different techniques of evaluation process provides us

the data in the form of scores or marks which are called as raw scores.

3	1 Marks	2m	TO	100%	1-time due	1
3	1 Marks	2m	TO	100%	6-time due	6
3	1 Marks	2m	TO	100%	8-time due	8

Scores Received by the Students

19, 14, 16, 16, 10, 5, 14, 9, 15, 15, 9, 10, 7, 8, 14

Increasing Order of Scores

5, 7, 8, 9, 9, 10, 14, 14, 14, 15, 15, 16, 16, 19, 9

Range

Range = Highest Score - Lowest Score

$$R = H.S - L.S$$

$$= 19 - 5$$

$$= 14 - 5$$

$$= 9$$

Number of Intervals

$$\text{Number of Intervals} = \frac{R}{L} + 1$$

$$= \frac{\text{Range}}{\text{Size of Class Interval}}$$

$$\text{Number of Intervals} = \frac{14 + 1}{2} = 7.5$$

$$\text{Number of Intervals} = 7.5$$

List of scores in class interval

Class Interval	Tally	Freq, Vency
5 - 7		2
7 - 9		3
9 - 11		2
11 - 13		1
13 - 15		3
15 - 17		4
17 - 19		1

Mean for grouped data

Mean or arithmetic mean (M). Mean is an average score obtained by dividing the sum of all scores by the total number of scores.

$$M = \frac{\text{Sum of all scores}}{\text{Total number of scores}}$$

Class interval	Frequency	Midpoint	$\sum fx$
5-7	2	6	12
7-9	3	8	24
9-11	1	10	10
11-13	1	12	12
13-15	3	14	42
15-17	4	16	64
17-19	1	18	18
			112

$N=15$

$\sum fx = 182$

$$\text{Mean} = \frac{\sum fx}{N} = \frac{182}{15} = \underline{12.13}$$

Median for grouped data

Median is the middle point of the distribution data

Median divides a grouped data into two equal one.

spouse no. of child. (M) norm distribution no. of M

$$\text{Median} = l + \left[\frac{\left(\frac{N}{2} - F \right)}{f} \right] i$$

no. of child. no. of M = M

Class Interval	Frequency	Cumulative Frequency	Mode
19-17	1	1	$l = 15.5$
17-15	4	5	$N = 15$
15-13	3	8	$f_m = 4$
13-11	1	9	$i = 2$
11-9	1	10	$N = 7.5$
9-7	3	13	$\frac{N}{2} = \frac{7.5}{2}$
7-5	3	15	$2.5 + \frac{N - f}{f_m} = 2.5 + \frac{7.5 - 8}{4} = 2.25$

Median = $l + \left[\frac{\left(\frac{N}{2} - F \right)}{f_m} \right] i$

$$= 15.5 + \left(\frac{7.5 - 8}{4} \right) g$$

$$g = 15.5 - 0.25$$

$$g = \underline{\underline{15.25}}$$

Mode

Mode is that score which occurs the maximum number of times in a given set of scores of data.

The approximation of the true mode can be calculated by the formula

$$\text{Mode} = 3 \times \text{median} - 2 \times \text{mean}$$

$$= 3 \times 14.5 - 2 \times 12.13$$

$$= 43.5 - 24.26$$

$$= 19.2$$

$$\left[\left(\frac{3}{2} - \frac{1}{6} \right) + 2 \right] = \text{mode}$$

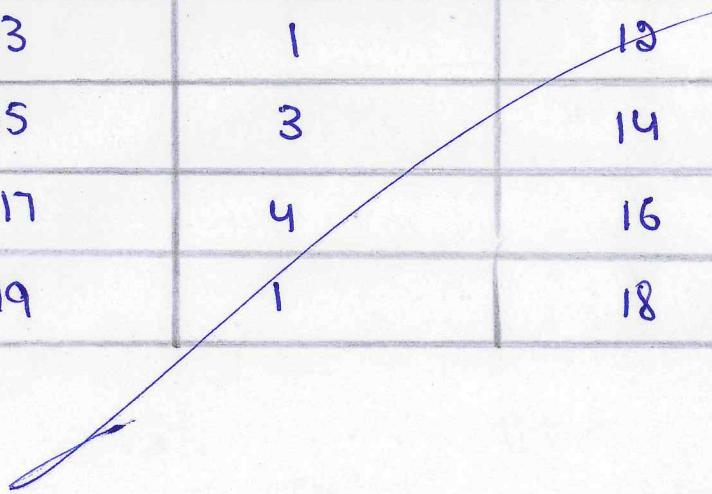

Graphical representation of frequency distribution.

Histogram

Class Intervals	Frequency	Lower limit	Upper limit
5-7	2	4.5	7.5
7-9	3	6.5	9.5
9-11	1	8.5	11.5
11-13	1	10.5	13.5
13-15	3	12.5	15.5
15-17	4	14.5	17.5
17-19	1	16.5	19.5

Interpretation

A unit test was conducted at Maulana Azad Model English School, Sakalehpur for the students of 8th standard. Answer scripts were corrected and statistical analysis was done by finding mean, median and mode.

The obtained values are as follows:

$$\text{Mean} = 18.13$$

$$\text{Median} = 18.8$$

$$\text{Mode} = 19.3$$

$$\text{Mean} < \text{Median} < \text{Mode}$$

$$18.13 < 18.8 < 19.3$$

Since the value of mean is nearly equal to median the test was average.

~~Salma Daulat~~

Conclusion

Unit test is the tool for evaluating the achievement of the student. It examines the achievement qualitatively and also quantitatively. It also helps the teacher to give individual attention to the needy.

Teacher can also guide the students in their learning activities. It also helps to discover the specific weakness of the students. It informs help to determine the ability of students in the subject of study. The results obtained in the test provide information about the teaching techniques and methods. Teacher can make changes in the methods of teaching.
